

Arc Treasury

The first yield vault natively built on
Circle's Arc L1

USDC yield from T-Bills. Built on Circle's L1. Live on
testnet.

The Problem

\$270B in stablecoins earning 0% yield

Billions idle. Users want safety + returns — but have no bridge between DeFi & T-Bills.

- DeFi lending = variable rates + smart contract risk
- TradFi = slow, limited access, no crypto rails
- USDC holders = zero yield on idle capital

Arc Treasury bridges this gap.

The Solution

Arc Treasury: T-Bill yield in one click

Feature	Description
Treasury Vault	Deposit USDC → earn ~4% APY from T-Bills via USYC
Cross-chain Bridge	Ethereum ↔ Arc via Circle CCTP V2
Stablecoin Swap	USDC/EURC AMM pool
Points & Rewards	Gamified incentives, NFT badges

USYC = Hashnote's tokenized US Treasury fund. Issued by Circle International, backed by short-term T-Bills (~4% APY). Instant USDC redemption 24/7, regulated by Bermuda Monetary Authority.

Live on testnet: arctreasury.biz

Why Arc?

Circle's own Layer 1 blockchain

Advantage	Benefit
Native USDC	Not bridged tokens
Direct Relationship	With \$60B stablecoin issuer
First Mover	Low competition advantage
Institutional-grade	Enterprise infrastructure

Building on Circle's strategic L1 = strong ecosystem backing

Fully Functional Product

100% Ready for Mainnet

Arc Treasury is not a concept — it's a fully operational DeFi yield vault, already live on testnet.

Component	Status
Treasury Vault	Real USYC integration (~4% APY)
Locked Positions	1, 3, and 12-month terms
Cross-chain Bridge	Circle CCTP V2 (Ethereum ↔ Arc)
Stablecoin Swap	USDC/EURC AMM pool
Points & NFT Badges	Fully gamified experience
Battle-tested	50+ testnet deployments

Business Model

Path to \$2.6M ARR at \$100M TVL

Revenue Stream	Fee	At \$100M TVL
Vault yield fee	5% of yield	\$200K/year
Bridge fees	0.06%	\$1.4M/year
Swap fees	0.2%	\$1M/year
Total		\$2.6M/year

\$2.6M/year revenue potential at just \$100M TVL — a fraction of stablecoin market share.

Market Opportunity

Massive and growing

Metric	Value
Stablecoin market	\$273B → \$1.5T by 2030
CCTP volume	\$110B+ processed
T-Bill yield protocols	\$1B+ TVL

Arc ecosystem = untapped first mover opportunity

Traction

Real testnet metrics — First Month

Metric	Value
Transactions	1,269 in 30 days
Volume	\$31M+ processed
Active wallets	162 (organic)
Points earned	290K+ total
Referrals	24 active

All metrics achieved with \$0 marketing spend — organic users from Arc ecosystem.

“The project is too early for direct investment from our side but we’ll keep a very close eye out as you continue to scale.”

Team

Lean & efficient execution

Anton — Founder & Lead Developer	Robert — Co-founder & Operations
@claimpilot	@Robsvr
• Full-stack blockchain dev (5+ years)	• COO at BonusBlock
• Built Arc Treasury solo: 11 contracts, full frontend	• Worked with: Injective, Xion, Axelar, Theoriq
• Base Batches 002, Zama FHE Builder Track	• BD & partnerships across L1/L2 ecosystems
• Built Stable2Pay — POS for Stable Network	

Ready to step in: SMM Manager, Market Researcher, Junior Developer

Investment Ask

Seed Round

Parameter	Value
Target	\$1,000,000
Minimum	\$600K
Token allocation	15-20%
FDV	\$5-6M
Instrument	SAFT
Vesting	6-month cliff, 18-month linear
Previous capital	\$0 (bootstrapped)
Lead investor	In discussions

Use of Funds — \$1M allocation

Category	Amount	Category	Amount
Security Audit	\$150K (15%)	Marketing	\$150K (15%)
USYC Integration	\$100K (10%)	Operations	\$120K (12%)
Team (6 hires Y1)	\$250K (25%)	Contingency	\$150K (15%)
Legal & Entity	\$80K (8%)		

Why Georgia? 0% corporate tax (retained earnings), 1-2 day company registration, VZP crypto-friendly status, growing Web3 hub. Legitimate & efficient — not offshore hiding.

Roadmap 2026-2027

When	Milestone
Q1 2026	Seed close, Georgian LLC
Q2 2026	Security audit, USYC institutional
Q3 2026	Mainnet launch on Arc
Q4 2026	\$5-15M TVL, growth push
2027	Multi-chain expansion via CCTP
Q4 2027	Token launch (TGE)

Competitive Advantage

Only vault natively integrated with Circle's Arc L1

vs Competitor	Our Edge
Ondo (\$600M TVL)	Arc-native, lower fees, gamified UX
Mountain Protocol	Native CCTP, no 3rd-party infra
Aave/Compound	Stable T-Bill yield vs variable

Why we're hard to copy:

- First in Arc = preferred Circle partner
- Full vertical stack, no external dependencies
- Points/NFT game layer → sticky UX

Why Invest Now?

1. **Working product** — not a whitepaper
2. **First mover on Arc** — Circle's strategic L1
3. **Real yield** — US T-Bills, not ponziomics
4. **Conservative valuation** — 20-40x upside potential
5. **Lean execution** — Built by 2 founders, shipping at startup speed — with institutional-grade architecture

We're raising a lean seed to own the Arc-native DeFi layer before TGE.

Your entry point to a new L1 — with real USDC yield baked in.

Let's Talk

We're raising \$1M to launch the Arc-native DeFi layer

Live testnet	Ready for audit
First mover on Arc	Circle alignment
Seed round open	\$5-6M FDV
