

Arc Treasury

The First Yield Vault Natively Built on Circle's Arc L1

The Problem

Billions in idle stablecoins. DeFi is too risky. TradFi is too slow.

\$270B+ in stablecoins earning 0% yield:

- Users hold USDC idle — no simple way to earn
- DeFi lending = variable rates, smart contract risk
- Traditional finance = slow, limited access

Arc Treasury fixes that.

The Solution

Arc Treasury: T-Bill yield in one click

Feature	Description
Treasury Vault	Deposit USDC → earn ~4% APY from US T-Bills
Cross-chain Bridge	CCTP V2: Ethereum ↔ Arc (Circle protocol)
Stablecoin Swap	USDC/EURC AMM
Points & Rewards	Gamified incentives, NFT badges

Live on testnet: arctreasury.biz

Why Arc?

Circle's own Layer 1 blockchain

- Native USDC (not bridged)
 - Direct relationship with \$60B stablecoin issuer
 - First mover advantage
 - Institutional-grade infrastructure
-

Product Status

100% functional on testnet

- Treasury Vault with real USYC integration (Hashnote)
- Locked positions: 1/3/12 month terms
- Working bridge, swap, points, NFT badges

- 11 smart contract versions, 50+ deployments
- React/TypeScript frontend, Supabase backend

Ready for mainnet after audit

Business Model

Path to \$2.6M ARR at \$100M TVL

Revenue Stream	Fee	At \$100M TVL
Vault yield fee	5% of yield	\$200K/year
Bridge fees	0.06%	\$1.4M/year
Swap fees	0.2%	\$1M/year
Total		\$2.6M/year

\$5M FDV → \$2.6M ARR potential = strong upside

Market Opportunity

Metric	Value
Stablecoin market	\$273B → \$1.5T by 2030
CCTP volume	\$110B+ processed
T-Bill yield protocols	\$1B+ TVL (Ondo, Mountain, etc.)

Arc ecosystem = untapped, first mover opportunity

Traction

Metric	Status
Product	100% functional on testnet
Contracts	11 versions, 50+ deployments
Testnet activity	60+ wallets, 28 NFT badges minted
Gamification	Referral multipliers, 20%+ retention

Circle Ventures: "Too early for now — but keeping a close eye" (Dec 2025)

Seed round interest from Arc ecosystem & RWA-focused funds

Team

Anton — Founder & Lead Developer

- Full-stack blockchain dev (5+ years)
- Built Arc Treasury solo: 11 contracts, full frontend, infra
- Previous: DeFi integrations, trading bots, web3 tooling

Robert — Co-founder & Operations

- Project management (5-15 person teams)
 - Startup operations & scaling experience
 - BD, partnerships, investor relations
-

Investment Ask

Parameter	Value
Round	Seed
Target	\$1,000,000
Minimum	\$600K
Token allocation	15-20%
FDV	\$5-6M
Instrument	SAFT
Vesting	6-month cliff, 18-month linear
Previous capital	\$0 (bootstrapped)
Lead investor	In discussions

Seed pricing reflects product risk, not market risk — we've built, tested, and aligned with the right L1 at the right time.

Use of Funds (\$1M)

Category	Amount	%
Security Audit	\$150K	15%
USYC Integration	\$100K	10%
Team (6 hires Y1)	\$250K	25%
Legal & Entity	\$80K	8%
Marketing	\$150K	15%

Operations	\$120K	12%
Contingency	\$150K	15%

Roadmap

When	Milestone
Q1 2026	Seed close, Georgian LLC
Q2 2026	Security audit, USYC institutional
Q3 2026	Mainnet launch on Arc
Q4 2026	\$5-15M TVL, growth push
Q1-Q3 2027	Cross-chain via CCTP (Ethereum ↔ Arc)
Q4 2027	Token launch (TGE)

Competitive Advantage

Only vault protocol natively integrated with Circle's Arc L1

vs Competitors	Our Edge
Ondo (\$600M TVL)	Arc-native, lower fees, gamified UX
Mountain Protocol	Native CCTP bridge, no 3rd-party infra
Aave/Compound	Stable T-Bill yield vs variable rates

Why we're hard to copy:

- First in Arc = preferred Circle infra partner
- Full vertical stack → no reliance on external bridges/yield
- Points/NFT game layer → sticky UX, organic liquidity

Why Invest Now?

1. **Working product** — not a whitepaper
2. **First mover on Arc** — Circle's strategic L1
3. **Real yield** — US T-Bills, not DeFi ponzinomics
4. **Conservative valuation** — 20-40x upside potential
5. **Lean execution** — 2 people built entire product

We're raising a lean seed round to own the Arc-native DeFi layer before TGE.

This is your entry point to a new L1 — with full-stack infra and real USDC yield baked in.
